

Universal Premium LOC

The Axxess **AX-BXLOC2** is a compact premium line output converter with active input circuitry, which allows it to accept speaker-level signals of up to 400 watts per channel from factory-installed source units or amplifiers. It converts them to high-quality pre-amp signals that can then be directed to aftermarket amplifiers. Factory audio systems regulate lower frequencies to prevent potential damage to the OE speakers. Some OE radios and amplifiers reduce the output of bass frequencies as the volume is increased. Having a product with a **Bass-X** restoration circuit in the LOC will allow users to enjoy their music as it was recorded. Users can enjoy maximum sound quality while maintaining the use of factory volume and steering wheel controls. **Axxess Load Resistors** may be required when installing this product. A bass remote control with digital voltmeter is included, so that you can monitor your car audio amplifier voltage to prevent damage to all your car audio equipment.

**Premium Active LOC
with Bass Restoration**
2 IN - 4 OUT, Input Of
400 Watts Per Channel,
Max Input 40v
