Metra PowerSports introduces new micro-amplifiers that are designed to be used in some harsh environments. With an IP rating of IPX6 the amplifiers are designed to get wet and not miss a beat. There are five models available with different power ratings. All of the MPS amps are bridgeable to provide more flexibility. The input side of the amplifiers have an 8” cable with an IP68 connector that is designed to plug directly into the MPS-BTK or MPS-BTK1 (Bluetooth controller sold separately). The amplifiers come with a pigtail that allows the user to use any radio or Bluetooth controller with an RCA output. The power cables are 8’ long with a waterproof fuse holder so to reach any battery location whether it be in a side-by-side or motorcycle.

ONE TOUGH BATTERY
Shuriken® offers batteries for powersports, motorcycle, ATV, marine and RV applications. These new batteries are designed to fit all of the most popular applications based on today’s BCI and JIS fitment standards. Perfect for replacing factory batteries in most motorcycle applications.

The Power Cells are extremely resistant to excessive heat and strong vibration. With super-low ESR and closely packed pure lead plates, each power cell packs a punch. Shuriken® Power Cells are designed to deliver the constant voltage needed for optimum performance. These batteries all use absorbed glass mat (AGM) technology and are fully charged, ready to use direct from the factory. They are non-spillable and maintenance free. Because of the AGM design, they can be discharged and recharged hundreds of times and come with a one-year replacement warranty.
