

**Jeep JK 2007-2018**  
**Excluding JL model**

**Bottom of Windshield Light Mount Bracket**  
**Installation**

**NOTE:** Brackets will accommodate lights with a post mount.

**Tools needed:** T40 Torx bit, 3/8" ratchet, 5mm Allen key, penetrating liquid (might be needed depending on vehicle).

1. Start by removing the (2) T40 Torx bolts from either the driver or passenger side of the vehicle at the base of the A-Pillar.

2. Now remove the adhesive backing on the rubber gasket and stick it to the back of the HEISE A-Pillar bracket near the bottom. **NOTE:** Align holes on gasket to holes on bracket, also apply rubber gasket to a clean surface.

3. Place bracket against A-Pillar and replace the Torx bolts with the new 8mm x 25mm long Button head Allen bolt, be sure to also use the supplied nylon washers. Use a 5mm Allen key (making sure not to tighten down completely until all bolts are threaded, this will insure proper fitment).

4. Repeat these steps for the other side.
5. Once light is in place insert post of light through bracket securing it with supplied nut.
