## HE-UVMM & HE-UVHM UNIVERSAL LIGHTING MOUNTS

SALES 386-257-2956

### PRODUCT OVERVIEW

An ultra-strong magnetic mount, the HE-UVMM, is a universal mount for adding aftermarket lights without drilling holes into the vehicle. The mount is sold as a pair, which can mount one light per bracket or a single lightbar using the set of two brackets. This mount is ideal for adding Heise LED lights to the top of the vehicle and is strong enough to hold a lightbar or two single lights in place. For the hood of a vehicle, Heise has introduced the HE-UVHM, a no-drill compression mount. It features rubber pads built into the bracket to protect the vehicle's paint and clamps into place on the hood. The mounts are sold as a pair and can mount one light per bracket or a single slim lightbar using the set. Both of these new mounts are ideal for adding Heise LED lights when drilling holes into the vehicle isn't an option.

#### HE-UVMM

*Add Heise LED lights to the top of a vehicle without drilling holes!*

- This mount is strong enough to hold a lightbar or two single lights in place
- Ultra-strong magnetic mount
