PRODUCT OVERVIEW

Newly designed silicone with egg wave foam, which allows for no more trimming or cutting and better sealing for better sound. These baffles provide a foldable speaker baffle design to improve the directional flow of sound waves and focus them into the cabin. It is designed to perfectly seal with speaker to the interior of the door panel. The package also includes a egg wave foam specifically cut for the size of the speaker to help with the sound wave flow. The water-resistant design provides protection for the speakers from the outside elements if they penetrate the door panel.

- Silicon design
- Egg wave foam for better sound
- Adjustable folding baffle
- Perfectly seals the speaker against the interior panel
- Available in a number of sizes

(1) The rear foldable ring protects speaker and improves sound.

(2) Silicone material is soft to seal between speaker and door panel.

(3) Silicone material is durable for harsh environment.

(4) The egg wave foam behind speaker improves sound by preventing sound wave bounced back.
